The Digital Asset For The Digital Age

The Pecu Novus Network

What Is The Pecu Novus Network?

The Pecu Novus Network is a blockchain technology powered network incorporating a digital asset that enables parties on the network to conduct instant, zero cost coin based transactions globally.

The Pecu Novus Network features the Pecu Novus Secure Escrow System, Smart Contract Enabled, Internal Messaging, Dual Confirmation, Transparent Transactions and more in development for ease of use. In addition the network features a larger and scalable block size which provides virtually instantaneous transaction confirmations, better storage efficiency and functionality for users of the network.

The symbol for Pecu Novus is PECU and the coins are referred to as PECU (pea-ku).

Origin of the Pecu Novus Name

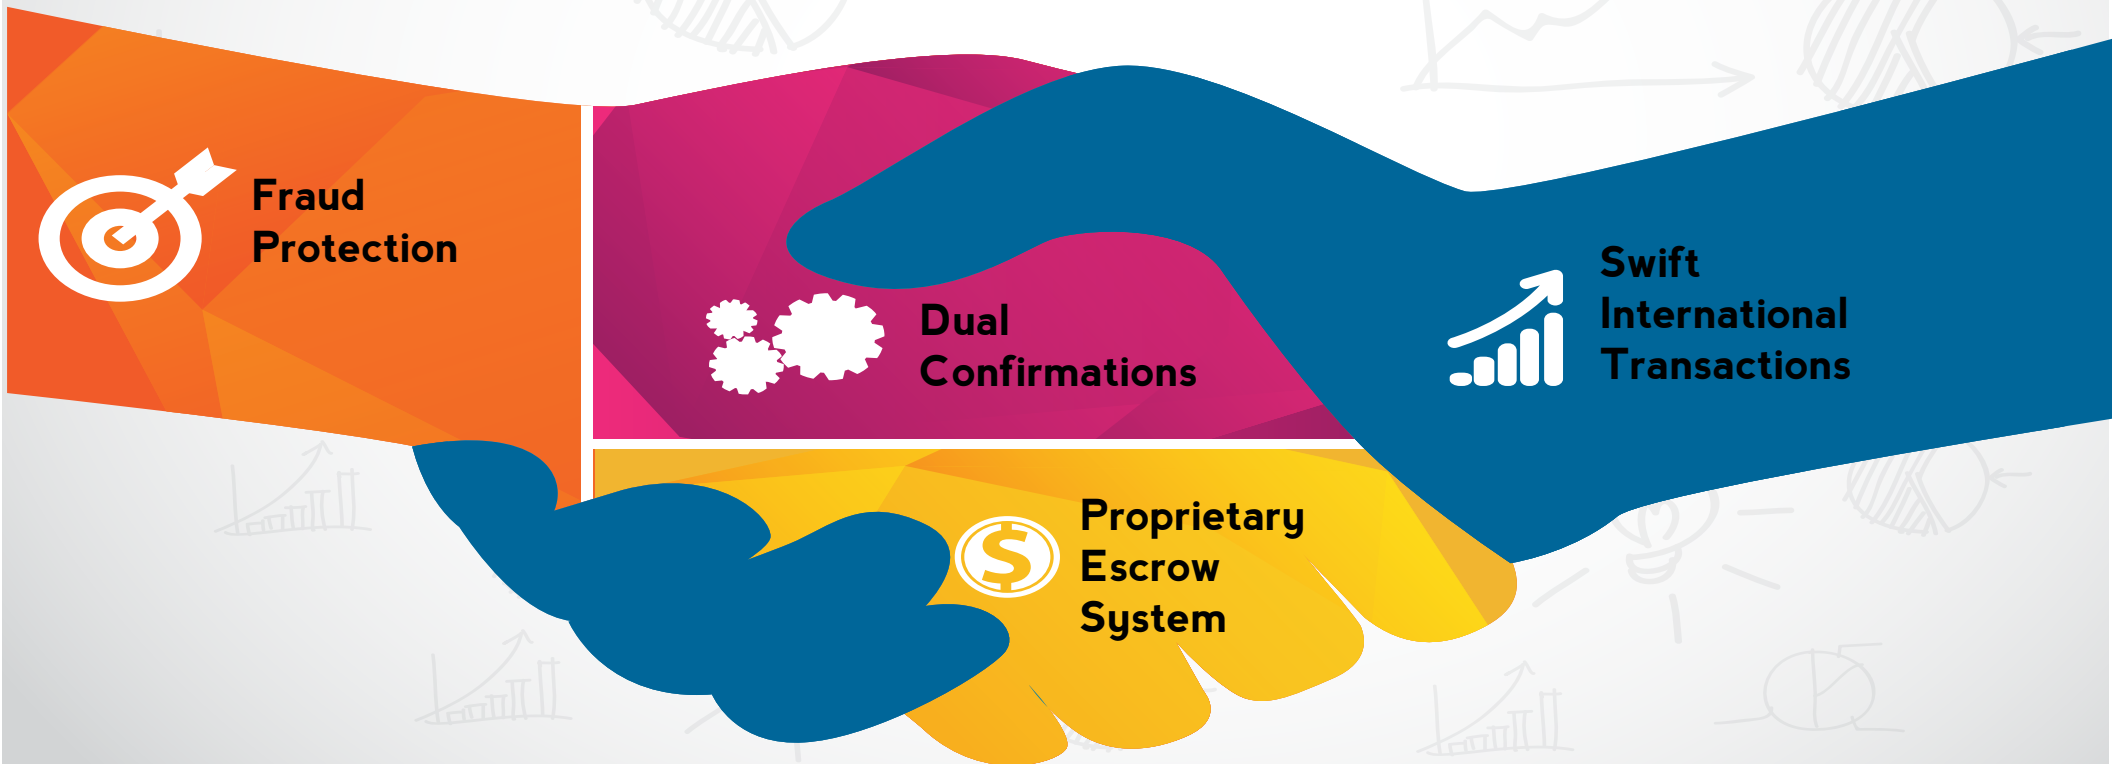

This viable digital asset was named Pecu Novus for a keen reason:

In Latin Pecunia means "MONEY" and Novus means "NEW", so in short Pecu Novus = NEW MONEY

PECU NOVUS WAS BUILT FOR BUSINESS

The Pecu Novus Network was built for business transactions where transparency and security are the standard. A proprietary escrow system allows for businesses to have more control over their transactions where most networks only offer final transactions. The network provides fraud protection, swift international transactions, dual confirmations and more.

Many Other Valuable Features Currently in Development

AUG 2017

The Pecu Novus Network concept was created.

DEC 2017

The Pecu Novus Network was launched. It was never an ICO.

MAR 2018

Megahoot takes over the development & maintenance of The Pecu Novus Network.

APR 2018

Digital Asset Distribution announced.

MAY 2018

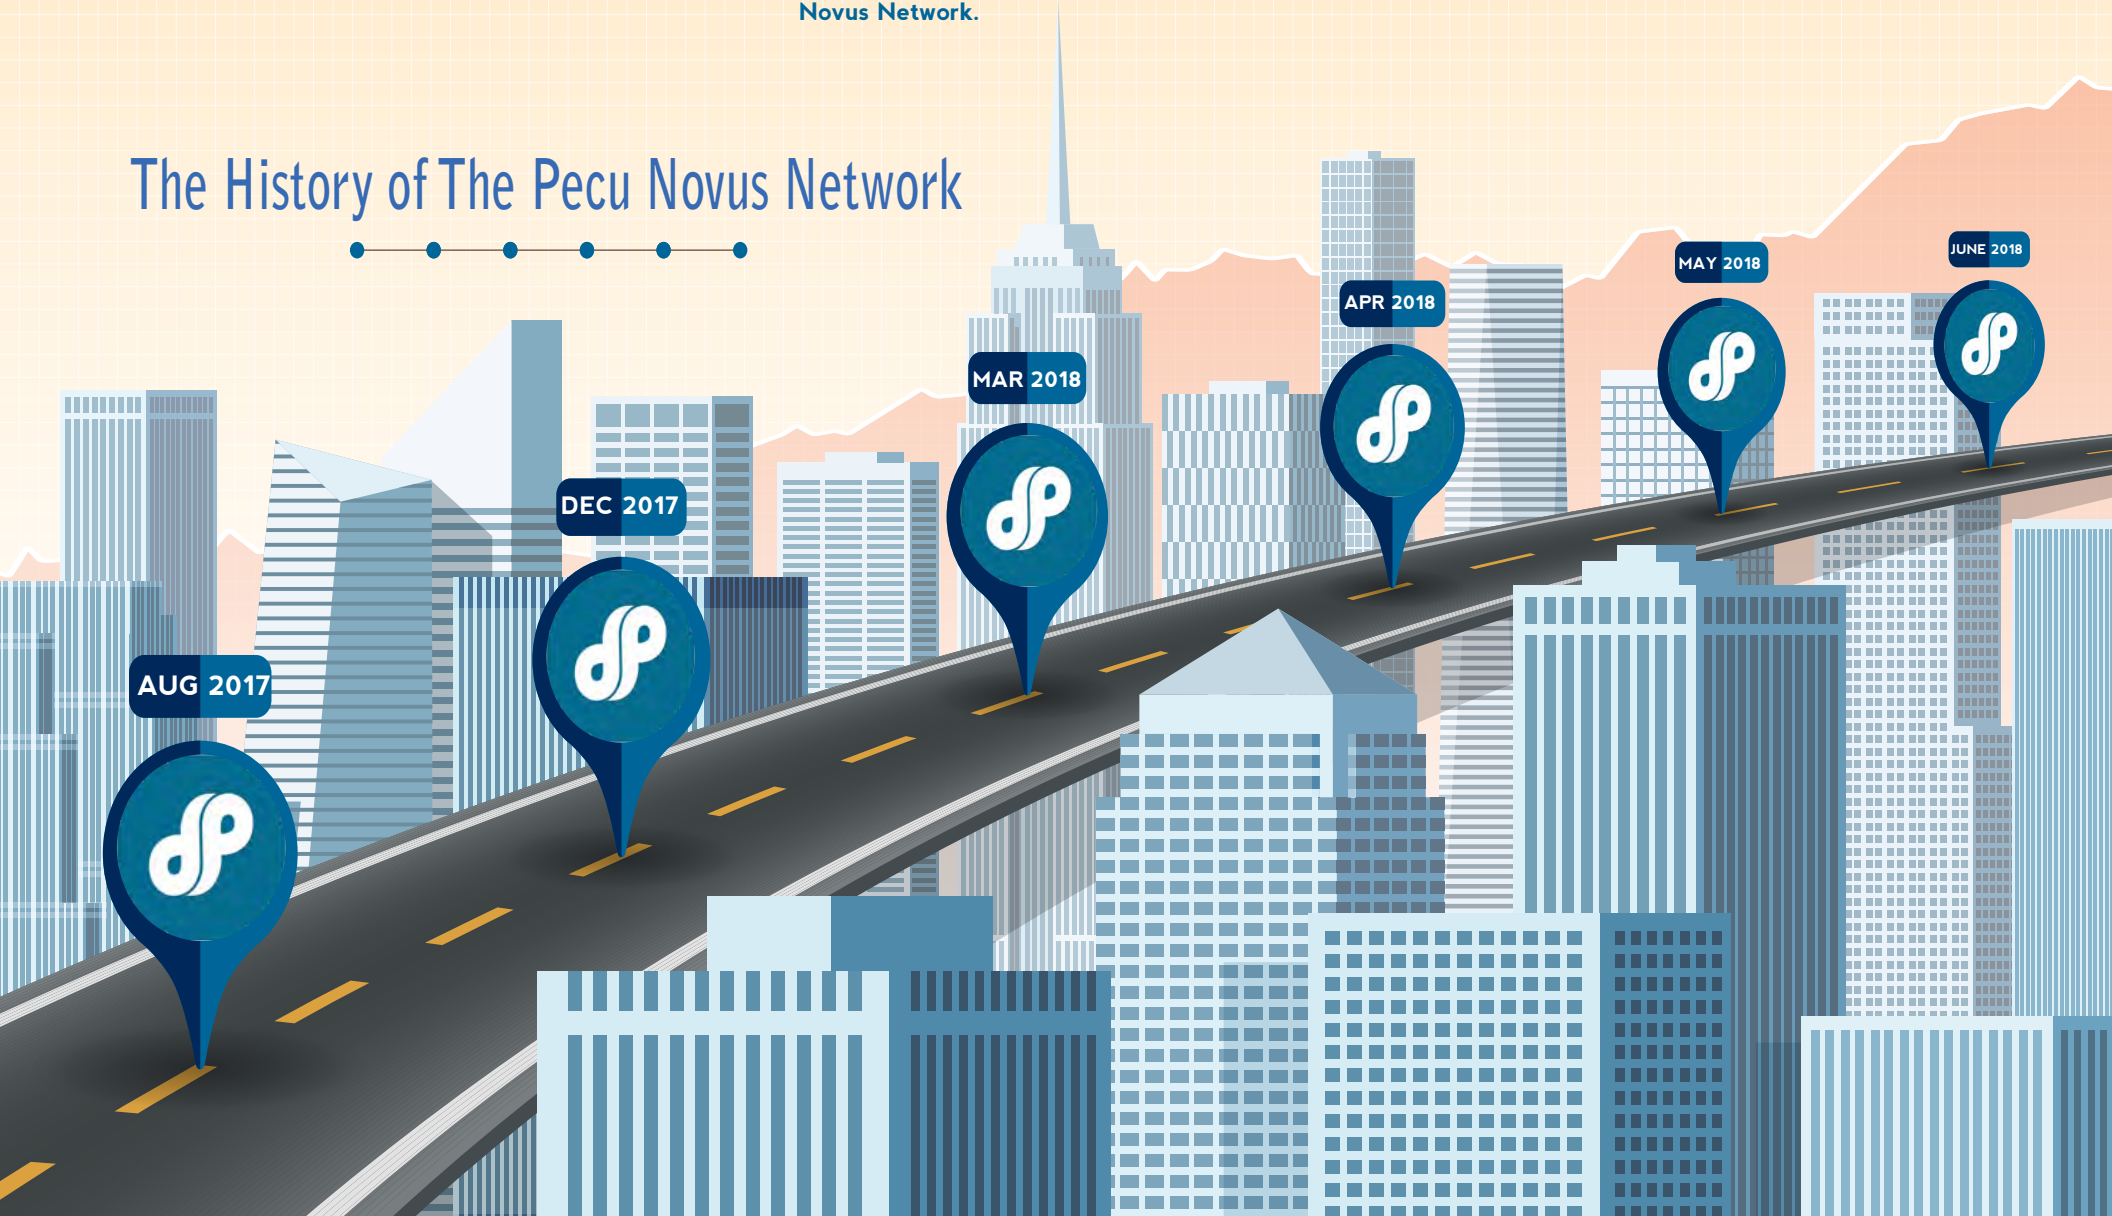

The Pecu Novus information website revamped and new logo introduced.

JUNE 2018

Digital Asset Dividend Distribution "DADD" to take place.

The History of The Pecu Novus Network

The Birth of The Pecu Novus Network

The creation of The Pecu Novus Network is a simple story of a problem and a solution. A group of software engineers teamed up in order to find a better way to conduct international business. They looked at all current methods in use today including the use of other cryptocurrencies, they knew that they could make it more functional, more affordable, more secure and more transparent. In August 2017 the journey began and in December 2017 the birth of The Pecu Novus Network happened.

The project was self funded by the development team and they took into account the inevitable regulation that would plague the sector in due time, so an Initial Coin Offering was never issued. Today the network is used by both businesses and individuals for secure transactions globally.

The Next Phase of The Pecu Novus Network

In March 2018 the development team understood that they would reach their limit as to how far they could take The Pecu Novus Network so they approached Megahoot to further develop, maintain and grow the network.

The Megahoot team created a new logo and redesigned the entire Pecu Novus information website to make it easier for the general public to understand the actual use of The Pecu Novus Network and its coins. Megahoot enhanced and developed new features for the network which benefits both businesses and individuals. The Megahoot Vault was launched in June 2018 which allows for the peer to peer exchange of Megahoot Coins, Pecu Novus coins and other coins/tokens will be onboarded late November 2018. It will also house secure digital documents and much more shortly. This will assist in creating liquidity and usage of Pecu Novus coins.

The Airdrop Program is scheduled to be launched late November 2018 where Pecu Novus coinholders will directly benefit. The Digital Asset Dividend Distribution “DADD” of Megahoot Coins were distributed to Pecu Novus coinholders within the Megahoot Vault on June 17, 2018.

Additionally, the Pecu Novus team will begin the process of marketing the functionality and utility of the network to businesses globally to increase the usage of the network. The marketing efforts will also include increasing the access, usage and distribution of the coin via various distribution channels such as ATM's and e-commerce payment platforms,

Through these efforts the team seeks to solidify The Pecu Novus Network as a standard global platform for business transactions globally.

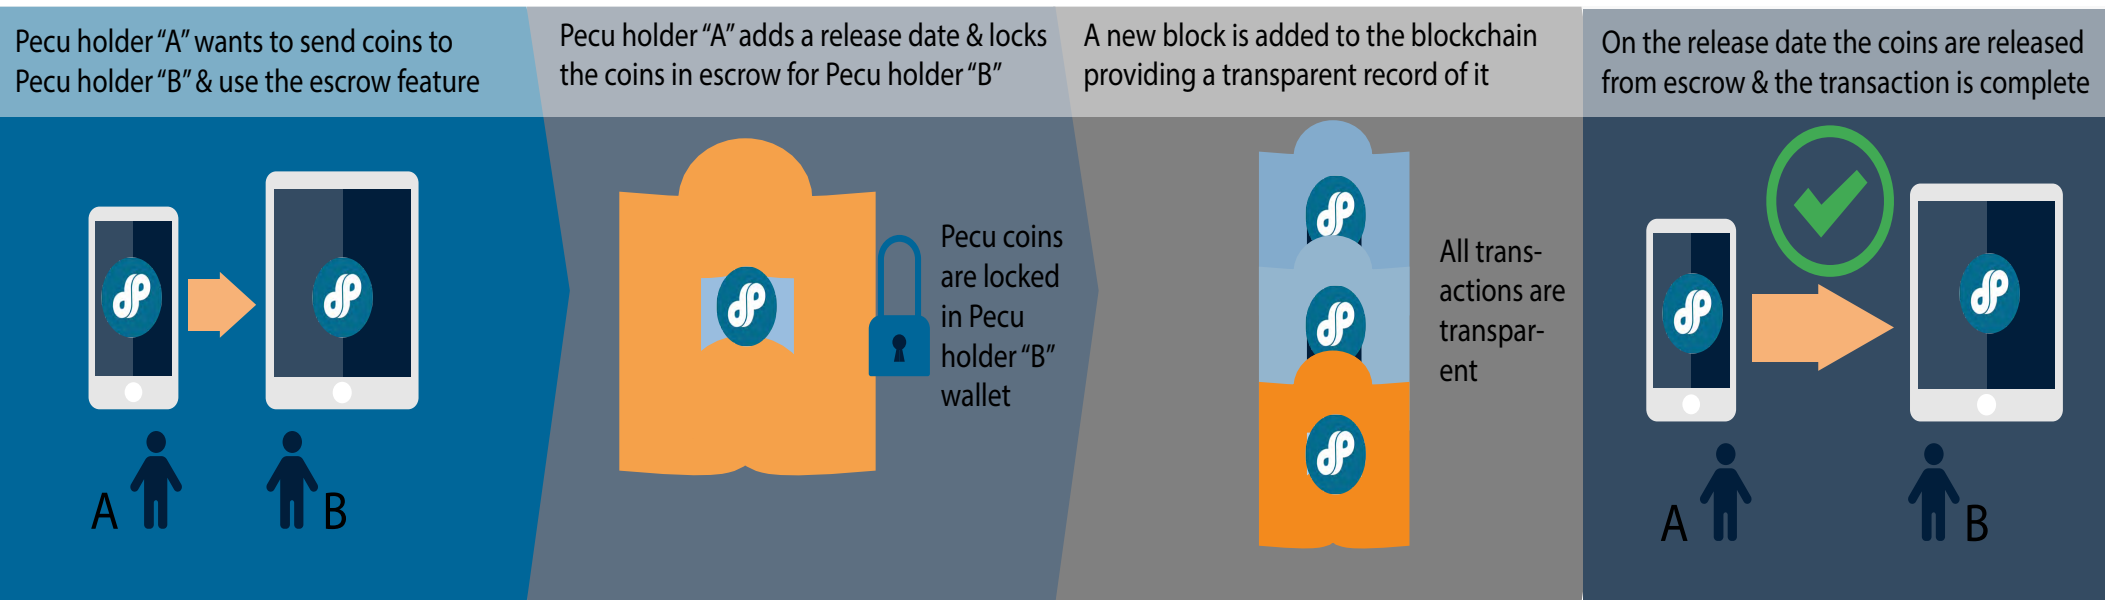

Is Pecunovus Seen as an Investment?

As with any store of value, whether it be digital or physical, the possibility of it accruing in value over time is solidly there. The key word is "VALUE". Pecunovus has a circulating supply of 10 million coins, 10 million coins not in circulation are designated for global commercial transactions and 80 million coins not in circulation are solely designated for the Pecunovus Asset Fund investment purposes. As the fund increases in value and usage grows globally so does the viability of the Pecunovus Network and coins. So like gold, silver, certain stocks or bonds, holding viable digital assets such as PECU have proven to be growth situations. The key with The Pecunovus Network is its utility and continued growth of the network and coin distribution globally.

What is the Escrow System Used For? and How Does it Work?

The Pecu Novus Escrow System was developed to protect both the sender and receiver of Pecu Coins. So as opposed to just sending coins free and clear for a transaction, no matter what the size, you can send them with a dated release option. So if the coins were being used for a real estate transaction or an import/export transaction, basically the coins and highlights of the contract would be inserted into the appropriate slot either "Note" and/or "Private Note" slots in the "Send Coins" area. That information becomes a permanent part of the blockchain. Once those coins are in escrow with a specific date then whatever transaction was to take place then takes place according to the physical or verbal contract. Both parties must validate the transaction for escrow to be released.

What is the Maximum Supply of Coins?

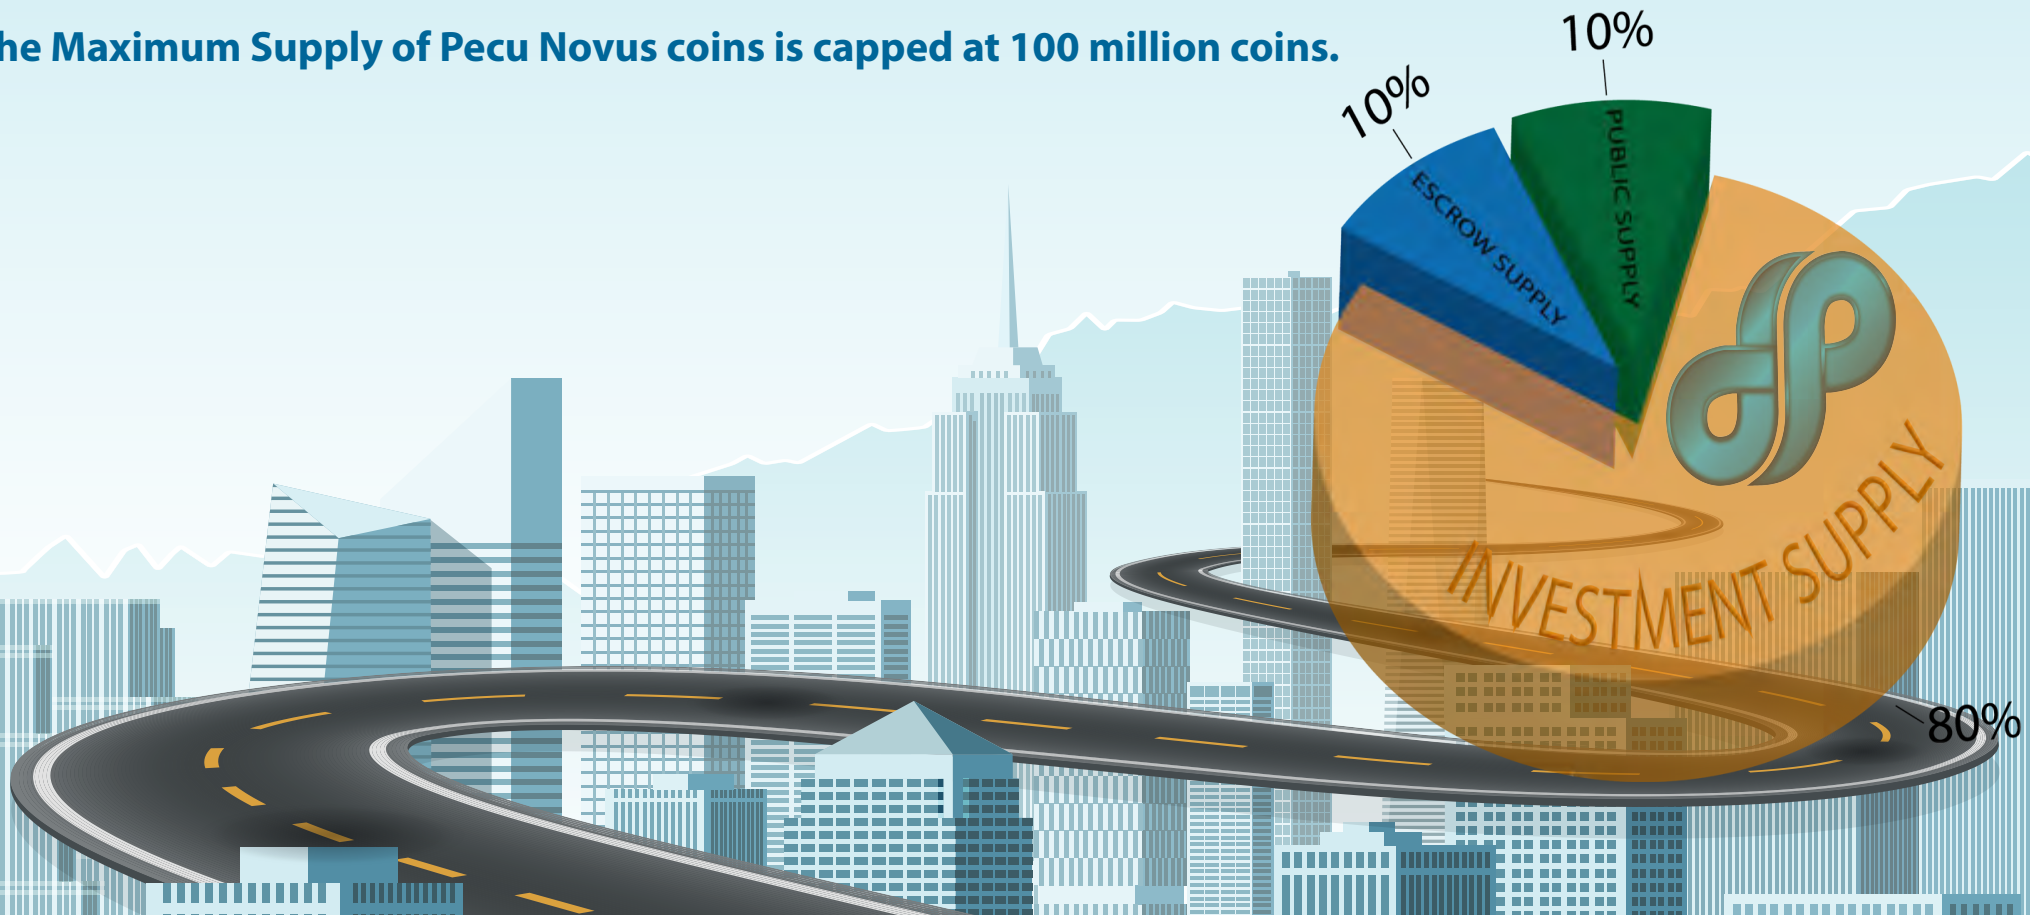

The maximum supply of coins is 100 million Pecunia Novus coins and are broken down as such:

Not in Public Circulation Currently: 80 million Pecunia Novus coins are in the Investment Supply to support the Pecunia Novus Asset Fund.

Not in Public Circulation: 10 million Pecunia Novus Coins are in the Escrow Supply for commercial purposes.

In Public Circulation: 10 million Pecunia Novus coins are freely in the Public Circulating Supply.

The Maximum Supply of Pecunia Novus coins is capped at 100 million coins.

The Pecu Novus Asset Fund

The Pecu Novus Asset Fund (the "Fund") would be best described as an "Hybrid Fund", whereby, the Fund's investment strategy is to invest over a wide variety of investment assets, including but not limited to, equity (in both private and public companies), debt (in both public and private companies), real estate, digital assets, precious metals, derivatives and others.

There is no fixed allocation of assets or fixed time frame that the Fund is required to hold any specific investment.

Currently, the Fund has invested in the equity of various companies and is actively seeking additional appropriate investment opportunities

Disclosure of the Fund's value will be made on a semi-annual basis and periodically the manager of the Fund may make announcements as to various investments that have been completed.

The Pecu Novus Asset Fund's manager is Falcon Global Acquisitions, LLC, Falcon Global Acquisitions is contracted to manage the Fund's assets and further the growth of the Fund's value and diversity.

The Pecu Novus Fund through the utilization of the Pecu Novus Coins, held within the Fund itself, will utilize those coins as the investment vehicle to further invest and diversify the Fund's portfolio of assets. The Fund will not seek out any outside investors to invest in the Fund, however, the Fund may join with other investors to jointly invest in various investment opportunities.
